

**Foreword** 

The CALABARZON Region is transitioning to the new normal and to the new administration. Part of this transition is addressing the economic disruptions brought by the COVID-19 pandemic and the series of typhoons which have affected the Region's growth momentum. Currently, through collaboration with experts and stakeholders in a whole-of-nation approach, we are in the process of formulating the successor Philippine/Regional Development Plan 2023-2028 that is anchored on the 8-Point Socioeconomic Agenda of the current administration and geared towards Ambisyon Natin 2040 – the Long Term Vision of the Country.

In crafting the Plan, there is a need for updated, comprehensive, and reliable statistics on various socioeconomic indicators as bases of assessment and as support to the formulation of strategies, programs, and policies.

Consistent with the objectives of the CALABARZON Regional Statistical Development Program 2018-2023, the 2022 Regional Social and Economic Trends (RSET) will cater to the increasing demand for disaggregated socioeconomic data. It will serve as reference of local planners and policy makers on relevant information on social and economic developments including significant regional trends. Likewise, it will serve as reference to the private sector in formulating marketing plans and strategies.

With this, I would like to express my utmost gratitude to the Philippine Statistics Authority Regional Statistics Service Office IV-A for its consistent commitment in producing a compendium of relevant and quality statistics which is available and accessible to all stakeholders. I would also like to acknowledge the active involvement of the metadata producers for their support in providing comprehensive and quality data.

With the publication of the 2022 RSET, I hope that policymakers, decision makers, and all stakeholders from both the public and the private sectors will be guided in delivering data-driven interventions and formulating more adaptive policies to accelerate sustainable and inclusive regional economic recovery.

**LUIS G. BANUA** 

Chairperson, CALABARZON Regional Statistics Committee Regional Director, NEDA IV-A

į

**MESSAGE** 

We are very pleased to present the 2022 CALABARZON Regional Social and Economic Trend (RSET), an annual publication that provides compilation of time series statistics of various sectors and is intended to address the data needs of the government as well as the private sectors at the regional or local level. In order to render efficient and effective local governance, we anchored this with the Regional Development Plan (2017-2022) and the Regional Statistical Development Program (2018-2023), to act as intermediary between various data source agencies and the socioeconomic planners.

The main purpose of this publication is to provide the government, decision makers, policy makers and business economies with the necessary data to be used in planning and development. Statistics in this publication reflects and visualizes the conditions in the society at the local level. It helps explain the facts that characterize the population, income and price, environment and natural resources, agriculture and agrarian reform, industry, trade, tourism, vital health, education, labor and employment, social services, transportation and communication, energy, public administration, money and banking, public order, safety and justice, and science and technology in CALABARZON at a particular time. Data contained here measure the changes that may have happened over a specified time period such as measuring the attainment of the Sustainable Development Goals (SDGs) at the local level.

Furthermore, the data presented in this publication reflects the aspects of everyone's lives that has been affected by the changes brought by the pandemic such as the implementation of different types of community quarantine, shifting to alternative or flexible learning and working

arrangement, retrenchment of employees in the private sectors, and closing of business establishments.

Without a doubt, the pandemic has affected the welfare of the people as well as the economy. As we gradually adjust to the new normal, the government will use data and statistics in policy making to be able to promote the welfare of the citizens and to help in the recovery of our economy. Local business entrepreneurs, and even private individuals have also conducted and doing continuous researches using data and statistics to strategize marketing plans, use resources and invest during the time of pandemic. This shows that during the pandemic, more people have come to appreciate the importance of statistics and reliable data.

Thus, we would like to thank and acknowledge all of our data providers for their collaboration and continuous support in providing quality, relevant and reliable statistics. Without them, this publication would not be possible. Similarly, we would like to express our appreciation to everyone who continue to use this publication in research and other evidence-based inquiry.

Lastly, we seek for the continued support of all our stakeholders, in order to guide us in improving future editions of the RSET.

CHARITO C. ARMONIA

Vice-Chairperson, Regional Statistics Committee and Regional Director, Philippine Statistics Authority IV-A

<sup>9/ - 1</sup> if the region satisfies the requirement of the indicator, 0 otherwise

## **Chapter 1**

## **Population and Housing**

Data on size, distribution and demographic characteristics of the population are vital in planning and decision-making process of the government and private businesses alike. The data can be of assistance in determining what, where, when and how public services and facilities should be put in place. The impact of services, programs and projects implemented are measured from the effect on the socioeconomic well-being of the populace as the fundamental beneficiaries of governance and development. Entrepreneurs, corporate executives and managers in the private sectors use the data in making decisions on how the resources will be distributed for their investment.

This chapter presents data series pertaining to the region and province, where available data series include the population count taken during several censuses conducted nationwide as well as the demographic characteristics, migration patterns and housing units. Projections of the population of the region from 2015 to 2025, which are estimated based on the results of the population census and demographic surveys, are also presented. The Philippine Statistics Authority is the data source for the census data and population projections.

#### Chapter 2

#### **Income and Prices**

Data on the levels and patterns of family income and expenditure, poverty incidence and threshold and price indices are vital indicators of the socioeconomic status of the people. Specifically, these data provide a picture of the standard of living, the varying degrees of inequality, the purchasing capacity, and the demand for the goods and services of families. The data are essential in the conceptualization and assessment of poverty alleviation programs of government, private and non-government organizations. The data have become more significant to all sectors now that genuine efforts are being demonstrated in pursuing the social reform agenda. The trends, patterns and signals shown by the data have been given wide and serious attention due to the far-reaching ramifications on policies and programs aimed at people empowerment. The usage of the data has accordingly permeated all echelons of the government bureaucracy, private businesses and even ordinary citizens themselves. With the support provided by the data, interventions can be implemented to help the citizenry respond to situations brought about by the increased prices and incidence of poverty and low-income capacity, among others.

This chapter presents data for the region and by province pertaining to family income, expenditures and consumer price indices. Several indicators derived from these basic data such as poverty incidence and threshold, inflation rate and purchasing power of peso are presented in this chapter. The income, expenditures and price data are generated from the results of the Family Income and Expenditures Survey (FIES) and price surveys of the Philippine Statistics Authority. The poverty statistics, on the other hand, are computed using the results of the FIES by the PSA Technical Staff.

#### Notes:

1/ significant change; The increase or decrease in the poverty incidence among families between 2018 and 2021 is significant at 10% level of significance ( $\alpha$  = 0.10).

a/ Coefficient of variation of 2018 poverty incidence among families is greater than 20%.

b/ Coefficient of variation of 2021 poverty incidence among families is greater than 20%.

c/ Caution in utilizing the estimate for the city must be observed due to its very small sample size.

p - This is based on the preliminary results of the 2021 Family Income and Expenditure Survey (FIES).

Notes:

<sup>1/</sup> The increase or decrease in the income gap between 2015 and 2018 is significant at 10% level of significance ( $\alpha$  = 0.10).

<sup>2/</sup> The increase or decrease in the income gap between 2018 and 2021 is significant at 10% level of significance ( $\alpha$  = 0.10).

a/ Caution in utilizing the estimate for these provinces must be observed due to its very small sample size in 2015.

b/ The 2015 estimates of Davao Occidental were excluded as the province was not yet considered in the Master Sample.

p - This is based on the preliminary results of the 2021 Family Income and Expenditure Survey (FIES).

Source: Philippine Statistics Authority, through a national government funded project on the generation of the 2012 and 2015 small area estimates of poverty

Notes: The standard deviation of an estimate can be derived by multiplying the poverty incidence and coefficient of variation then divide by 100.

### **Chapter 3**

### **Economic Accounts**

The economic accounts of the region, which is presented in terms of the Gross Regional Domestic Product (GRDP), provide a comprehensive quantitative description of the regional economy. Specifically, the GRDP illustrates the level and growth of the region's economic output for a given period. Moreover, it shows the structure of the regional economy whether it is predominantly agricultural or industrial. It also highlights the sectors that contributed to and are of great potential to the region's growth. Lastly, the GRDP, as a macroeconomic indicator of economic performance, is not only essential in charting the socio-economic growth path of the region, but also essential in planning, policy formulation and analytical exercises.

This chapter presents the GRDP on an annual basis in terms of levels, growth rates, and indices at constant and current prices. The Philippine Statistics Authority generates the series from primary and secondary data gathered from various sources in the country.

### **Chapter 4**

# **Environment and Natural Resources**

The region's abundant and rich natural resources need to be protected and preserved and so there is a need for sound and effective policies for the proper management of these precious natural assets. Therefore, data regarding the environmental situation in the region is essential as a basis for proper formulation and design of conservation efforts to protect and conserve biodiversity. All these concerns give emphasis to the need for more reliable, timely and comprehensive data. The data are critical not only to the government and private sector but as well as the international community in their formulation of measures to safeguard the environment and natural resources and to remedy destruction and degradation to these areas.

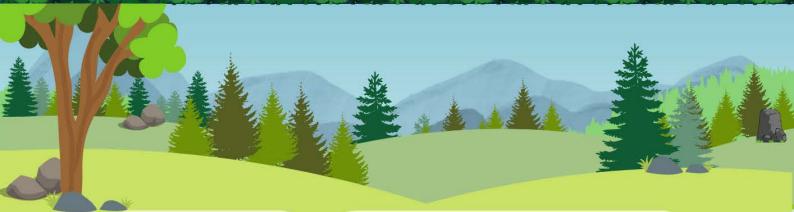

This chapter presents data on existing/available land, watershed, and protected areas of the region and its provinces, as well as data on the production of forest products and non-metallic minerals. The data were generated from the Department of Environment and Natural Resources (DENR), specifically the Forest Management Bureau (FMB) and the Mines and Geo-Sciences Bureau (MGB).

#### **Chapter 5**

#### **Agriculture and Agrarian Reform**

Data on agriculture and agrarian reform are vital in the formulation of programs and policies geared towards the development of the agriculture and fishery sectors. In fact, improving the condition of the agriculture sector is a priority thrust of the government today. This is anchored on the situation where agriculture still plays a major role in the growth and stability of the region's economy, as well as in its part in providing food for the survival of the population. This also means focusing on the agrarian reform program in order to promote social justice, sound rural development and industrialization. Hence, these data become the bases for the redirection of the focus of our legislators to the advancement of the agriculture and fisheries sectors. The data also provide indicators of the successes and impacts of strategies and programs in the lives of farmers and fisherfolks in the countryside.

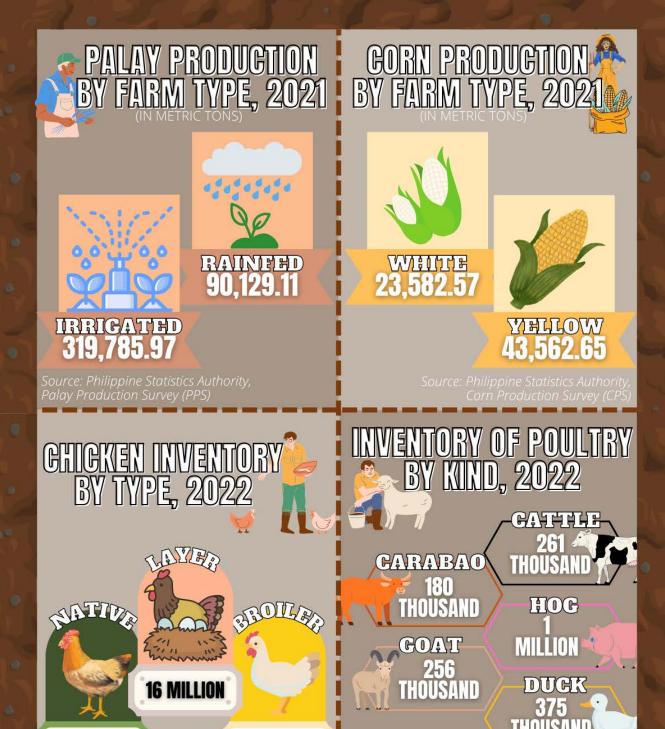

This chapter presents data on palay, corn and other crops, livestock, poultry and fishery production, as well as data on the number of slaughtered animals in the region. These statistics are sourced from the Philippine Statistics Authority (PSA). Data on the implementation of the Comprehensive Agrarian Reform Program (CARP) were gathered from the Department of Agrarian Reform while data on cooperatives were taken from the Cooperative Development Authority (CDA).

#### Chapter 6

#### **Establishment Characteristics:**

#### **Industrial Sector**

Data on the industries obtaining in the region and investments serve as gauge of the extent of the area's attractiveness and capability to absorb entrepreneurial ventures. An analysis of the data on the size and growth of industries and the stock and flow of investments shows the enabling factors that provide or enhance the comparative advantages enjoyed by industries and investors in the area. On the other hand, the data can give indications of the limiting factors that hinder the entry, growth, and movement of industries and investments. With the data providing signals, the concerned governmental instrumentalities can formulate policies, enforce regulations and undertake infrastructure programs and other forms of assistance to business and prospective investors. Armed with the data, key decision makers in the government and the private sectors can also forge alliances to improve the business climate and environment. Ultimately, the policies and measures implemented as well as the alliances can serve as instruments for achieving growth and providing employment opportunities, among others, to the region's labor force.

This chapter presents regional and provincial data, where available, on the number of establishments by sector, distribution of manufacturing establishments, the number, floor area and value of private building construction and the value of investments and exports in the region. This also presents data indicators on the size of the local economy, capacity to generate employment and cost of doing business. The data sources are the Philippine Statistics Authority for the establishments and building construction data, the Philippine Economic Zone Authority (PEZA) for the economic indicators, approved investments and value of exports within PEZA in CALABARZON and the National Competitiveness Council for the City/Municipality Competitiveness Index.

## **Chapter 7**

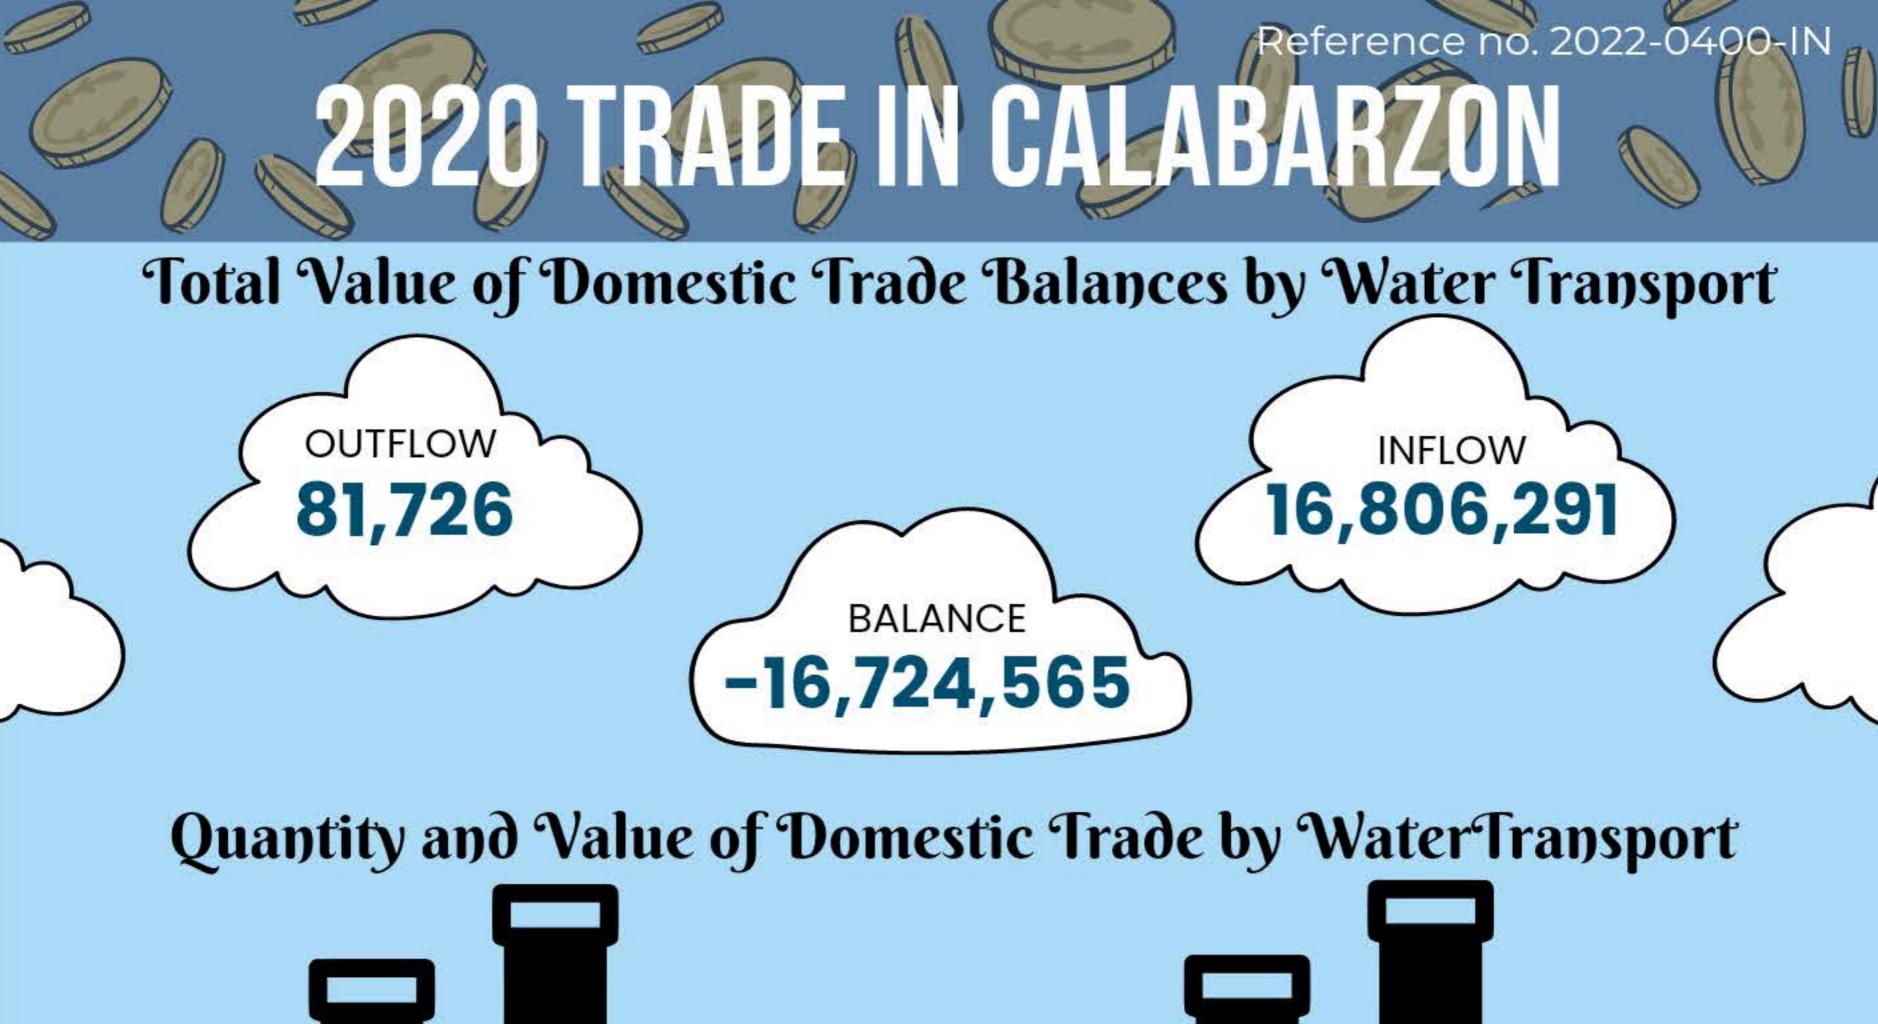

### **Trade**

Data on trade reflect the extent of the inward and outward flow of commodities in an area. The data likewise indicate the commodities that go into the export and import markets or are used for domestic or foreign consumption. Proprietors and the managers and executives of private businesses can use the data in identifying markets with high potentials and in making decisions on which commodities to produce and what markets to penetrate. Leaders and implementers in the government, on the other hand, can conceptualize and initiate programs, projects, services and facilities designed to further stimulate trading activities in high yielding areas and/or in those sectors where a demand and supply gap exists. The data are also useful in identifying areas and products that can be improved/promoted for global competitiveness.

This chapter presents data on the volume and value of commodities that enters ports located in the region either for exports or imports and the value of commodity flow by mode of transport. The Philippine Statistics Authority is the source of the data, which are processed from administrative reporting forms by agencies in government involved in the collection of customs and tariff charges, or administration of ports.

## **Chapter 8**

### **Tourism**

Data on tourism provide a panorama of the region as a tourist destination. The significance of the picture presented by the data manifests the importance accorded to the tourism industry by both national and local leaders. Specifically, tourism has become a twin source of foreign exchange receipts and livelihood and employment opportunities for communities. Data on the industry are therefore essential in providing vital links in the development and orchestration of campaigns aimed at promoting the potentials of the region as a tourist hideaway. Local leaders can put up infrastructure programs and institute policies and regulations that will boost the inflow of visitors. Investors, on the other hand, can take the signals by developing tourist and recreational sites and putting up establishments and amenities. The data provide likewise indicators that promote the area as a traveller's destination and its contributions to the economic performance of the destination.

This chapter presents regional and/or provincial data on the visitor arrivals and their countries of residence/origin and the number of hotel and hotel rooms and other accommodation establishments. The data was sourced from the different Provincial Tourism Offices, Local Government Units, Accommodation Establishments, consolidated by DOT Region IV-A.

#### **STATISTICAL TABLES:**

| Table 8.1 | Number of DOT Accredited Accommodations by Type and by Province, 2014-2020                                    | 8-3  |

### **Chapter 9**

### Vital, Health and Nutrition

Data on vital events, health and nutrition are key inputs to programs aimed at providing the basic minimum services to the citizenry. The data provide a profile of the health status and the level, causes and patterns of mortality and morbidity of the population. The health and nutrition status of the people are an utmost concern of local governance. The focus of current development efforts is towards extending better services and expanding the delivery system even to the remotest rural communities. This is anchored on the concept that no individual should be deprived of the right to health care. Furthermore, the strength and well-being of the people influence their capabilities to engage in various economic endeavors. A cross analysis of the data with the demographic and socioeconomic information of the target population shows the existing and potential problems in an area. The health and nutrition status of the population should therefore be a priority in public service and resolved immediately so as to truly empower the people, an objective of growth and development. These concerns and objectives necessitate the provision of the data as bases in the delivery of services catering to the health and nutritional requirements of individuals.

This chapter presents statistics for the region and its provinces/cities on the registration of vital events occurring in the areas. The data include the number of births and deaths including infant, fetal and maternal deaths, and leading causes of mortality. This chapter likewise contains data on health facilities, bed to population ratio of hospitals and health workers. Meanwhile, the data on health and nutrition presented include the nutritional status of children and leading causes of morbidity. The data are sourced from the Department of Health.

## Chapter 10 Education

Data on the country's educational system are essential in the planning, implementation, and supervision of programs in this field. The primary goal of the programs is to develop a meaningful and efficient educational system in the country. This is a priority thrust of the government today. The specific objective of educational programs is to update the quality of our educational system at all levels. Education is indispensable in bringing about the desired behavioral and attitudinal changes in the population to effect socioeconomic development. The far-reaching and enduring effects of a literate citizenry on individual and societal growth and progress call for serious efforts to continuously improve and promote the accessibility of our educational system to changes in the socioeconomic sphere and the demands of development initiatives pose a challenge to our decision-makers and educators. To address these challenges in the most efficient and effective manner, an adequate and timely supply of data focusing on the levels and state of resources and facilities and the accomplishments of our educational system is indeed vital.

This chapter presents data on important aspects of the educational system at the regional down to the division level. Each division is comprised of various cities and municipalities. The statistics presented include enrolment and number of schools and teachers by level and government or private and tertiary graduates by program. The chapter contains performance indicators, such as participation, retention, survival, completion, drop-out, and transition rates. The basic source of data is the EBEIS (Enhanced Basic Education Information System) of the Department of Education (DepEd).
