Of the total household population in 2020, 32,646 (50.9%) were males while 31,534 (49.1%) were females. By age group, 18,685 persons (29.1%) were under 15 years of age (young dependents), while persons aged 15 to 64 years (working-age or economically active population) totaled 40,857 (63.7%). Those in the age group 65 years and over (old dependents) comprised the remaining 4,638 persons (7.2%).

In 2015, persons aged 0 to 14 years, 15 to 64 years, and 65 years and above accounted for 29.8 percent, 63.7 percent, and 6.4 percent, respectively, of the total household population.

Moreover, there were more males (90.1%) than females (87.4%) among the 0 to 59 age group. Meanwhile, for older age group (60 years and over) females (12.6%) outnumbered the males (9.9%). The same trend was also observed in 2015.

Sex ratio stands at 104 males per 100 females

The sex ratio in Atimonan was computed at 104 in 2020. This implies that there were 104 males for every 100 females. In 2015, the sex ratio was slightly lower at 103 males for every 100 females.

In 2020, children aged below 15 years had a sex ratio of 107 males for every 100 females, while those aged 15 - 64 years old had a sex ratio of 106 males for every 100 females. On the other hand, those aged 65 years and over had a sex ratio of 73 males for every 100 females. This implies a higher mortality rate among males than females or a longer life expectancy among females than males in the older age groups.
