 Reference No. 2024-078

As of May 1, 2020, the household population of Burdeos was recorded at 24,627 individuals, based on the result of the 2020 Census of Population and Housing (2020 CPH).

Of the total household population in 2020, 12,779 (51.9%) were males while 11,848 (48.1%) were females. By age group, 8,845 persons (35.9%) were under 15 years of age (young dependents), while persons aged 15 to 64 years (working-age or economically active population) totaled 14,628 (59.4%). Those in the age group 65 years and over (old dependents) comprised the remaining 1,154 persons (4.7%).

In 2015, persons aged 0 to 14 years, 15 to 64 years, and 65 years and above accounted for 38.1 percent, 58.2 percent, and 3.7 percent, respectively, of the total household population.

Moreover, there were more males (93.2%) than females (91.8%) among the 0 to 59 age group. Meanwhile, for older age group (60 years and over) females (8.2%) outnumbered the males (6.8%). The same trend was also observed in 2015.

Sex ratio stands at 108 males per 100 females

The sex ratio in Burdeos was computed at 108 in 2020. This implies that there were 108 males for every 100 females. In 2015, the sex ratio was slightly higher at 110 males for every 100 females.

In 2020, children aged below 15 years had a sex ratio of 108 males for every 100 females, while those aged 15 - 64 years old had a sex ratio of 110 males for every 100 females. On the other hand, those aged 65 years and over had a sex ratio of 81 males for every 100 females. This implies a higher mortality rate among males than females or a longer life expectancy among females than males in the older age groups.
