As of May 1, 2020, the household population of Real was recorded at 38,641 individuals, based on the result of the 2020 Census of Population and Housing (2020 CPH).

Of the total household population in 2020, 19,867 (51.4%) were males while 18,774 (48.6%) were females. By age group, 12,845 persons (33.2%) were under 15 years of age (young dependents), while persons aged 15 to 64 years (working age or economically active population) totaled 24,016 (62.2%). Those in the age group 65 years and over (old dependents) comprised the remaining 1,780 persons (4.6%).

In 2015, persons aged 0 to 14 years, 15 to 64 years, and 65 years and above accounted for 34.1 percent, 61.9 percent, and 4.0 percent, respectively, of the total household population.

Moreover, there were more males (93.0%) than females (91.7%) among the 0 to 59 age group. Meanwhile, for older age group (60 years and over) females (8.3%) outnumbered the males (7.0%). The same trend was also observed in 2015.

### Sex ratio stands at 106 males per 100 females

The sex ratio in Real was computed at 106 in 2020. This implies that there were 106 males for every 100 females. In 2015, the sex ratio was 105 males for every 100 females.

In 2020, children aged below 15 years had a sex ratio of 108 males for every 100 females, while those aged 15 - 64 years old had a sex ratio of 107 males for every 100 females. On the other hand, those aged 65 years and over had a sex ratio of 77 males for every 100 females. This implies a higher mortality rate among males than females or a longer life expectancy among females than males in the older age groups.
